Dipharma introduces an improved and protecting packaging solution for its Sapropterin products also in Far East countries

Chiasso, Switzerland, May 7, 2025 – Dipharma SA is pleased to announce the introduction of a new and innovative packaging solution to protect its Sapropterin products, designed specifically for far east countries.

This solution aligns with the highest standards reached by our medicines in the European markets , featuring a state-of-the-art customized tray system designed to provide exceptional protection and preservation of the product.

Developed in collaboration with Körber, a global leader in pharmaceutical technology, the new packaging—called "Safepack"— represents a new benchmark in product protection and quality.

The Safepack features a double-walled design with an air chamber on all six sides, providing enhanced cushioning and robust protection for the bottles containing Sapropterin soluble tablets. This pioneering design ensures optimal preservation of the tablets' integrity, safeguarding them against potential damage during transportation and storage.

"With the introduction of Safepack, we reaffirm our commitment to innovation and the provision of high-quality solutions for patients. Packaging plays a pivotal role in ensuring our medicines reach patients in perfect condition," said Fabio Cannata, General Manager at Dipharma SA. "Our collaboration with Körber highlights the transformative power of innovation and partnership in advancing pharmaceutical packaging."

"The testing process – said Claudia Langjahr, Packaging Development Engineer at Körber - involved dropping the package multiple times to simulate potential real-world accidents. And the results were impressive: even under the most extreme conditions, the customized Safepack was able to protect the tables from any kind of breakage"
